**PUROLATOR DEPTH MEDIA** is available in sheets and discs with applications for numerous markets.

Proprietary formulation process produces precision depth media that provides superior filtration and long on-stream life cycles. Particles are captured through a combination of mechanical capture and electrokinetic adsorption.

**DEPTH-CLEAR C Series** ("C" stands for CARBON) filter modules are comprised of highly porous activated carbon combined with cellulose fibers. These modules efficiently decolorize fluids and absorb a wide array of unwanted contaminants from process streams. The encapsulated design of DEPTH-CLEAR C Series modules eliminates many of the common process and safety issues associated with bulk activated carbon technology.

**DEPTH-CLEAR S Series** ("S" stands for STANDARD) filter modules, constructed of specially formulated cellulose media and inorganic filter aids, provide reliable particle retention and enhanced throughput for superior performance in critical applications. Highly efficient...highly adaptable.

**DEPTH-CLEAR SA & U Series** ("SA" stands for SUPER ABSORBENT and "U" stands for UTILITY) filter modules are redesigned to meet the critical needs of the power distribution and generation industries in the reconditioning of dielectric oil used in transformers and circuit breakers.

**DEPTH-CLEAR P & LE Series** ("P" stands for PHARMACEUTICAL and "LE" stands for LOW EXTRACTABLE) filter modules are specifically formulated to meet the performance demands of biopharmaceutical and biotech applications. The filter media utilize mechanical and electrokinetic adsorptive capture mechanisms to remove particles, microorganisms, colloids, and pyrogen from critical process streams.
